

Neurological Rehabilitation for HK Healthcare Professionals

Introduction of the Rehabilitation Medicine Certificate Course

Neurological Rehabilitation is an active and comprehensive program for treating patients with damages and deficits in the brain, nervous system or spinal cord. Neurological rehabilitation is mainly used for patients who have stroke, parkinsonism, traumatic brain injuries or spinal cord injuries.

Our rehabilitation courses provide comprehensive and all-rounded practical training including medical, nursing, physiotherapy, occupational therapy, speech therapy, psychology, prosthesis and orthotics therapy services. We intend to train up frontline healthcare professionals to be more competent in delivering evidence-based and practical neurological rehabilitation services for patients of all ages. We focus on improving patients' functional limitation consequent to certain neurological conditions. The diverse and wide-ranging knowledge of the speakers will offer a unique lens through which to view the modern rehabilitation arena.

This Neurological Rehabilitation program is one of our seven rehabilitation modules, namely neurological rehabilitation, musculoskeletal rehabilitation, cardiopulmonary rehabilitation, paediatric rehabilitation, geriatric rehabilitation, sports rehabilitation and mental rehabilitation. Each module consists of seven sessions and each session lasts for three hours. The entire rehabilitation medicine certificate course thus lasts for (21 hours * 7) 147 hours.

Special features of the course

1. Taught by different well experienced health professionals (eg. Medical doctors, physiotherapists, occupational therapists, speech therapists, psychologists, etc). Transdisciplinary healthcare approach will be emphasized.
2. Nurses will be awarded CNE points (CPD points for physiotherapists, occupational therapists, and speech therapists are pending)
3. Theoretical and practical components are both included. There will be discussions on case studies and practical workshops in each module.
4. Detailed lecture notes (mainly in English) will be distributed.
5. Participants can choose to attend any one of the modules or all modules.
6. Participants who finish all seven modules and pass all the examinations will be issued an "Advanced Certificate in Rehabilitation Professionals".

Target Participants:

Nurses, Medical Doctors, Physiotherapists, Speech Therapists, Occupational Therapists, Sport Instructors, Personal Trainers, PE Teachers

Organization Host:

GRS 健瑞仕
Health Services
